

# octoplant

## Asset and data protection for industrial automation

Industrial operations are becoming increasingly more complex as data management expectations are higher than ever:

- Growing number of OT systems from different manufacturers, steadily rising data volumes
- 24/7 operational processes with increasingly tight setup times and shrinking batch sizes
- External factors such as compliance, regulations, and cybersecurity risks

Meet octoplant from AUVESY-MDT, the end-to-end solution that allows plant operations to run as one, securing automation and device capabilities. Obtain information at the touch of a button and access programs, configurations and documentation that helps companies to comply with legal regulations and simplifies audits.

Ensure data consistency and greater protection with this modular software platform that is adapted to the unique challenges of your industrial plant. Built-in business intelligence guarantees a constant evaluation of your systems, unlocking crucial insights to safeguard production daily with its eight core elements.

More than 2,500 companies worldwide are using octoplant to protect their systems against downtime and gain guaranteed compliance and change management through a seamless combination of OT and IT.

Enjoy greater efficiency and lower costs through predictive maintenance and data-based decision making with octoplant from AUVESY-MDT.

96 %

...would recommend AUVESY-MDT.

84 %

...agree with the statement that they save time.

73 %

...see the availability of data & documentation as the biggest advantage.

*„Other similar solutions only cover individual machines or partial aspects of a plant (such as PLCs, SCADA, and HMI), or the programming of robotics. But octoplant is different, because it gives you transparency and security in every element of your plant. As a link between OT and IT, octoplant lets business intelligence and cybersecurity users step up to a new, future-facing level.“*

Stefan Jesse, Group COO, AUVESY-MDT

# The octoplant promise: keep production running!

AUVESY-MDT applications are used in more than ten million devices. Many of the world's biggest and best-known brands rely on octoplant.

Use our [device Finder](#) and see for yourself just how many devices octoplant is compatible with.

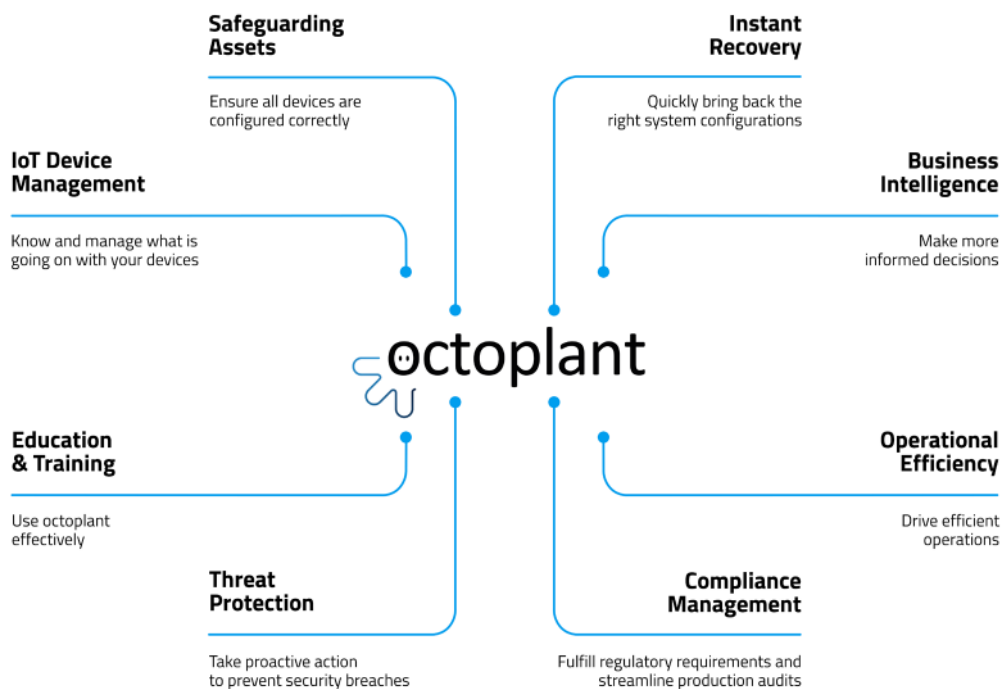

octoplant is used as a data management platform in numerous automated production industries.

With its eight core elements, this modular software delivers data transparency along the entire automation chain and ensures maximum reliability.

## Core, Plus, or Premium? Find your right octoplant package.

The octoplant platform is quickly and easily managed to back up your production environment, make informed safety and data-driven decisions and maximize efficiency with multi-site visibility.

**Core:** Quickly and easily manage and back up your production environment

**Plus:** Make informed decisions for safe and efficient production

**Premium:** Maximize efficiency with multi-site visibility and the highest level of security
